

Turn-Up Tool

Our Turn-Up Tool is a great way to save time and money while protecting your home. Designed for use with our Tuff-Rib Panels, this tool bends up the upper end of the panel. This prevents blowing rain and debris from entering. It can be used at ridges, hips, endwalls, and more.

Optionally you can also install rubber foam closure strips in front of the bent up end to provide even more protection than the turn up alone.

Made in the U.S.A. using
high quality steel.

This tool is part of a collection of tools
recommended for Tuff-Rib metal
roofing from Best Buy Metals.
