

Architectural, Structural, Standing Seam

Vertical Seam

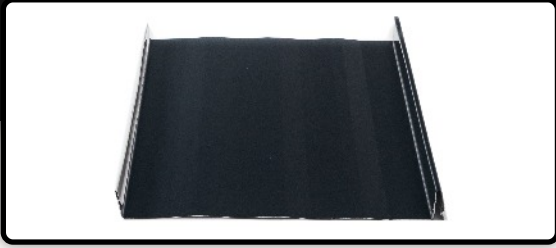

A Stronger more
Versatile Standing Seam

With 1-3/4" high ribs, Vertical Seam can be installed over either open framing or solid decking. This standing seam system is fastened using hidden clips, allowing greater expansion and contraction of the panels, at the same time ensuring wind resistance. Vertical Seam comes standard with striations to eliminate oil canning and provide strength, but can also be ordered as flat pan. Flat pan orders will need to be specified.

Vertical Seam

Architectural, Structural, Standing Seam

Architectural

Vertical Seam is a beautiful residential roof product. For a traditional standing seam look, combined with a simple, yet effective snap-and-lock application, Vertical Seam is often the right choice.

Structural

In addition to residential applications, Vertical Seam is also an effective roof on buildings with even more stringent requirements.

Vertical Seam has 1-3/4" high ribs. Combine that with the strength of steel, and Vertical Seam can be installed over open framing - even spaced 4-5 feet apart. Can be installed on down to a 1:12 pitch on solid decked applications.

Standing Seam

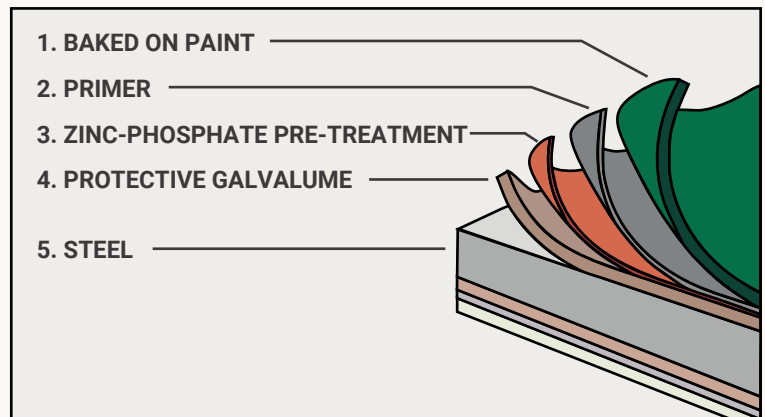

You get all the great benefits of a steel standing seam system: longevity, strength, beauty, and and peace of mind. Vertical Seam will last much longer than alternative roofing systems, at a lower cost per year of use.

Specifications:

- 40 Year Paint Warranty
- 26 and 24 Gauge Available
- 12", 16", or 18" Coverage
- 1-3/4" Rib Height
- Fire, Hail, & Wind Resistant
- Available in Over 16 Attractive Colors
- Energy Star Rated on All Colors
- Installs over Solid Decking or Open Framing
- Minimum Slope Over Solid Decking: 1:12
- Minimum Slope Over Open Framing: 3:12
- Finish Options: SMP, Kynar 500, ACG Galvalume

Advanced Protective Coatings

Vertical Seam is protected by baked on enamel paint: tough for installation, resistant to fading, and Energy Star® reflectivity to save on utility bills.

Paint: Durable baked on paint offers a permanent finish, easily lasting 40+ years. This ensures protection and beauty for years to come.

Galvalume: Under the paint, Galvalume (55% zinc, 45% aluminum) provides lasting corrosion protection, even if paint is scratched during installation.

Steel: A heart of high-tensile steel guarantees strength and endurance. With the highest ratings possible for wind, hail, and fire, Vertical Seam is ready to weather anything nature throws its way.
